

UniKey

How clever are your Valve and Hydrant Keys?

Never again be in a situation where your Valve or Hydrant Key won't fit... even if the Stem Cap is missing or damaged... the UniKey will fit!

Truly a unique product offering a precision engineered solution to potentially life endangering situations.

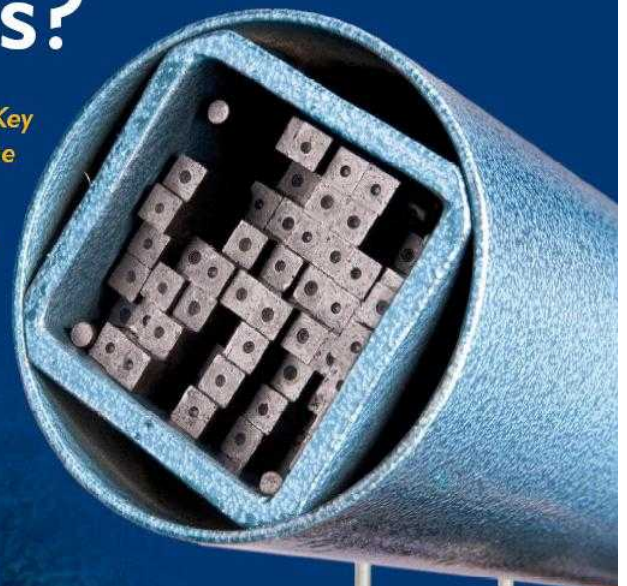

The UniKey is a brand new product designed primarily for the Water Industry but with many more applicable uses and applications!

The design philosophy is that 'one kit fits all'... therefore it will 'fit' all known valve and hydrant spindle shapes and sizes, and cater for broken or missing Stem Caps. It can also be used on irregular shapes such as stop tap handles... even if they are damaged or incomplete!

Used in conjunction with the Shaft Extensions... the user is also equipped to operate 'deeper' Valves whilst reducing the risk of physical strain injuries.

Key features...

- 'One size fits all' design
- Robust construction, welded and powder coated
- Available individually or as a Kit
- Integral 'Tee' Handle with 'chisel' end
- Shaft Extensions available

Application...

For operating or basically turning 'on' or 'off' Water, Gas and Industrial application valves and/or Hydrants of various designs whereby a 'normal' Valve Key or special tool such as a Crutch Key is currently being used.

Features...

The Hy-Ram Universal Valve Key Kit fits all known valve spindles and Stem Caps and therefore mitigates the need for operators to transport and carry a multitude of 'dedicated' Valve Keys of differing shapes and sizes. The UniKey is manufactured in two sizes: a 'Small' Key designed around Water Valves on pipes up to 12" (300mm) diameter and Fire Hydrants and a 'Large' Key for use on valves above 12" diameter.

The UniKey, with integral 'Tee' Handle is available either separately or as a Kit containing one of each size. The Kit also comes complete with two shaft extensions: 450mm and 750mm long. These can be secured to the top of the Valve Key Shaft; particularly useful when encountering 'deep' Valves where no 'traditional' Extension Spindle has been fitted. The 'Tee' Handle has a handy chisel end for prising open access covers.

Quality and Durability...

The UniKey is made from high quality, non corroding materials... primarily aluminum and powder coated steel. The keys have been extensively 'field-trialed' and Hy-Ram have undertaken extensive in-house testing.

All components of the kit are secured in the strong steel carry case complete with carrying handles. Relatively lightweight – yet extremely durable for tough operating environments and long life.

The emphasis is on 'quality'... all components are made, assembled and tested in the UK in compliance with Hy-Ram's ISO9001 certification.

Shaft Extension secured with pin

Integral Tee Handle

Kit to include: 2 x UniKeys, 2 x Shaft Extensions & Pin, 'Tee' Handle, Steel Storage Case
